

CreditPulse-AI

Autonomous Risk Management & Real-Time Portfolio Stress-Testing

TA Srinivas

Founder & Lead AI Engineer

T. Pujitha Sri

Co-Developer

The Core Problem: Workflow Friction

Severe Backlogs

Risk analysts waste critical hours scrubbing manual, chaotic data logs in rigid spreadsheets. This creates a severe operational bottleneck in validation decisioning.

Delayed Loss Detection

Volatile credit trends and customer over-utilization indicators go fully undetected until major capital losses are already booked, leaving lenders in a reactive state.

| The Structural Blindspot

4+ Hours

WASTED ON MANUAL PROCESSING

Static Tools Fail

Traditional spreadsheets are fundamentally static. When macroeconomic risk thresholds shift unexpectedly, sheets fail to show immediate exposure across multi-tiered credit metrics.

This critical delay prevents timely decisioning, leaving modern digital lenders completely blind to rapid downstream portfolio deterioration.

The Frictionless User Journey

1. The Trigger

Market volatility strikes. The risk analyst needs to immediately test over-utilization limits across outstanding portfolios.

2. The Friction Loop

Hours wasted mapping spreadsheet headers, debugging formulas, and executing manual scoring loops before getting insights.

3. CreditPulse Touch

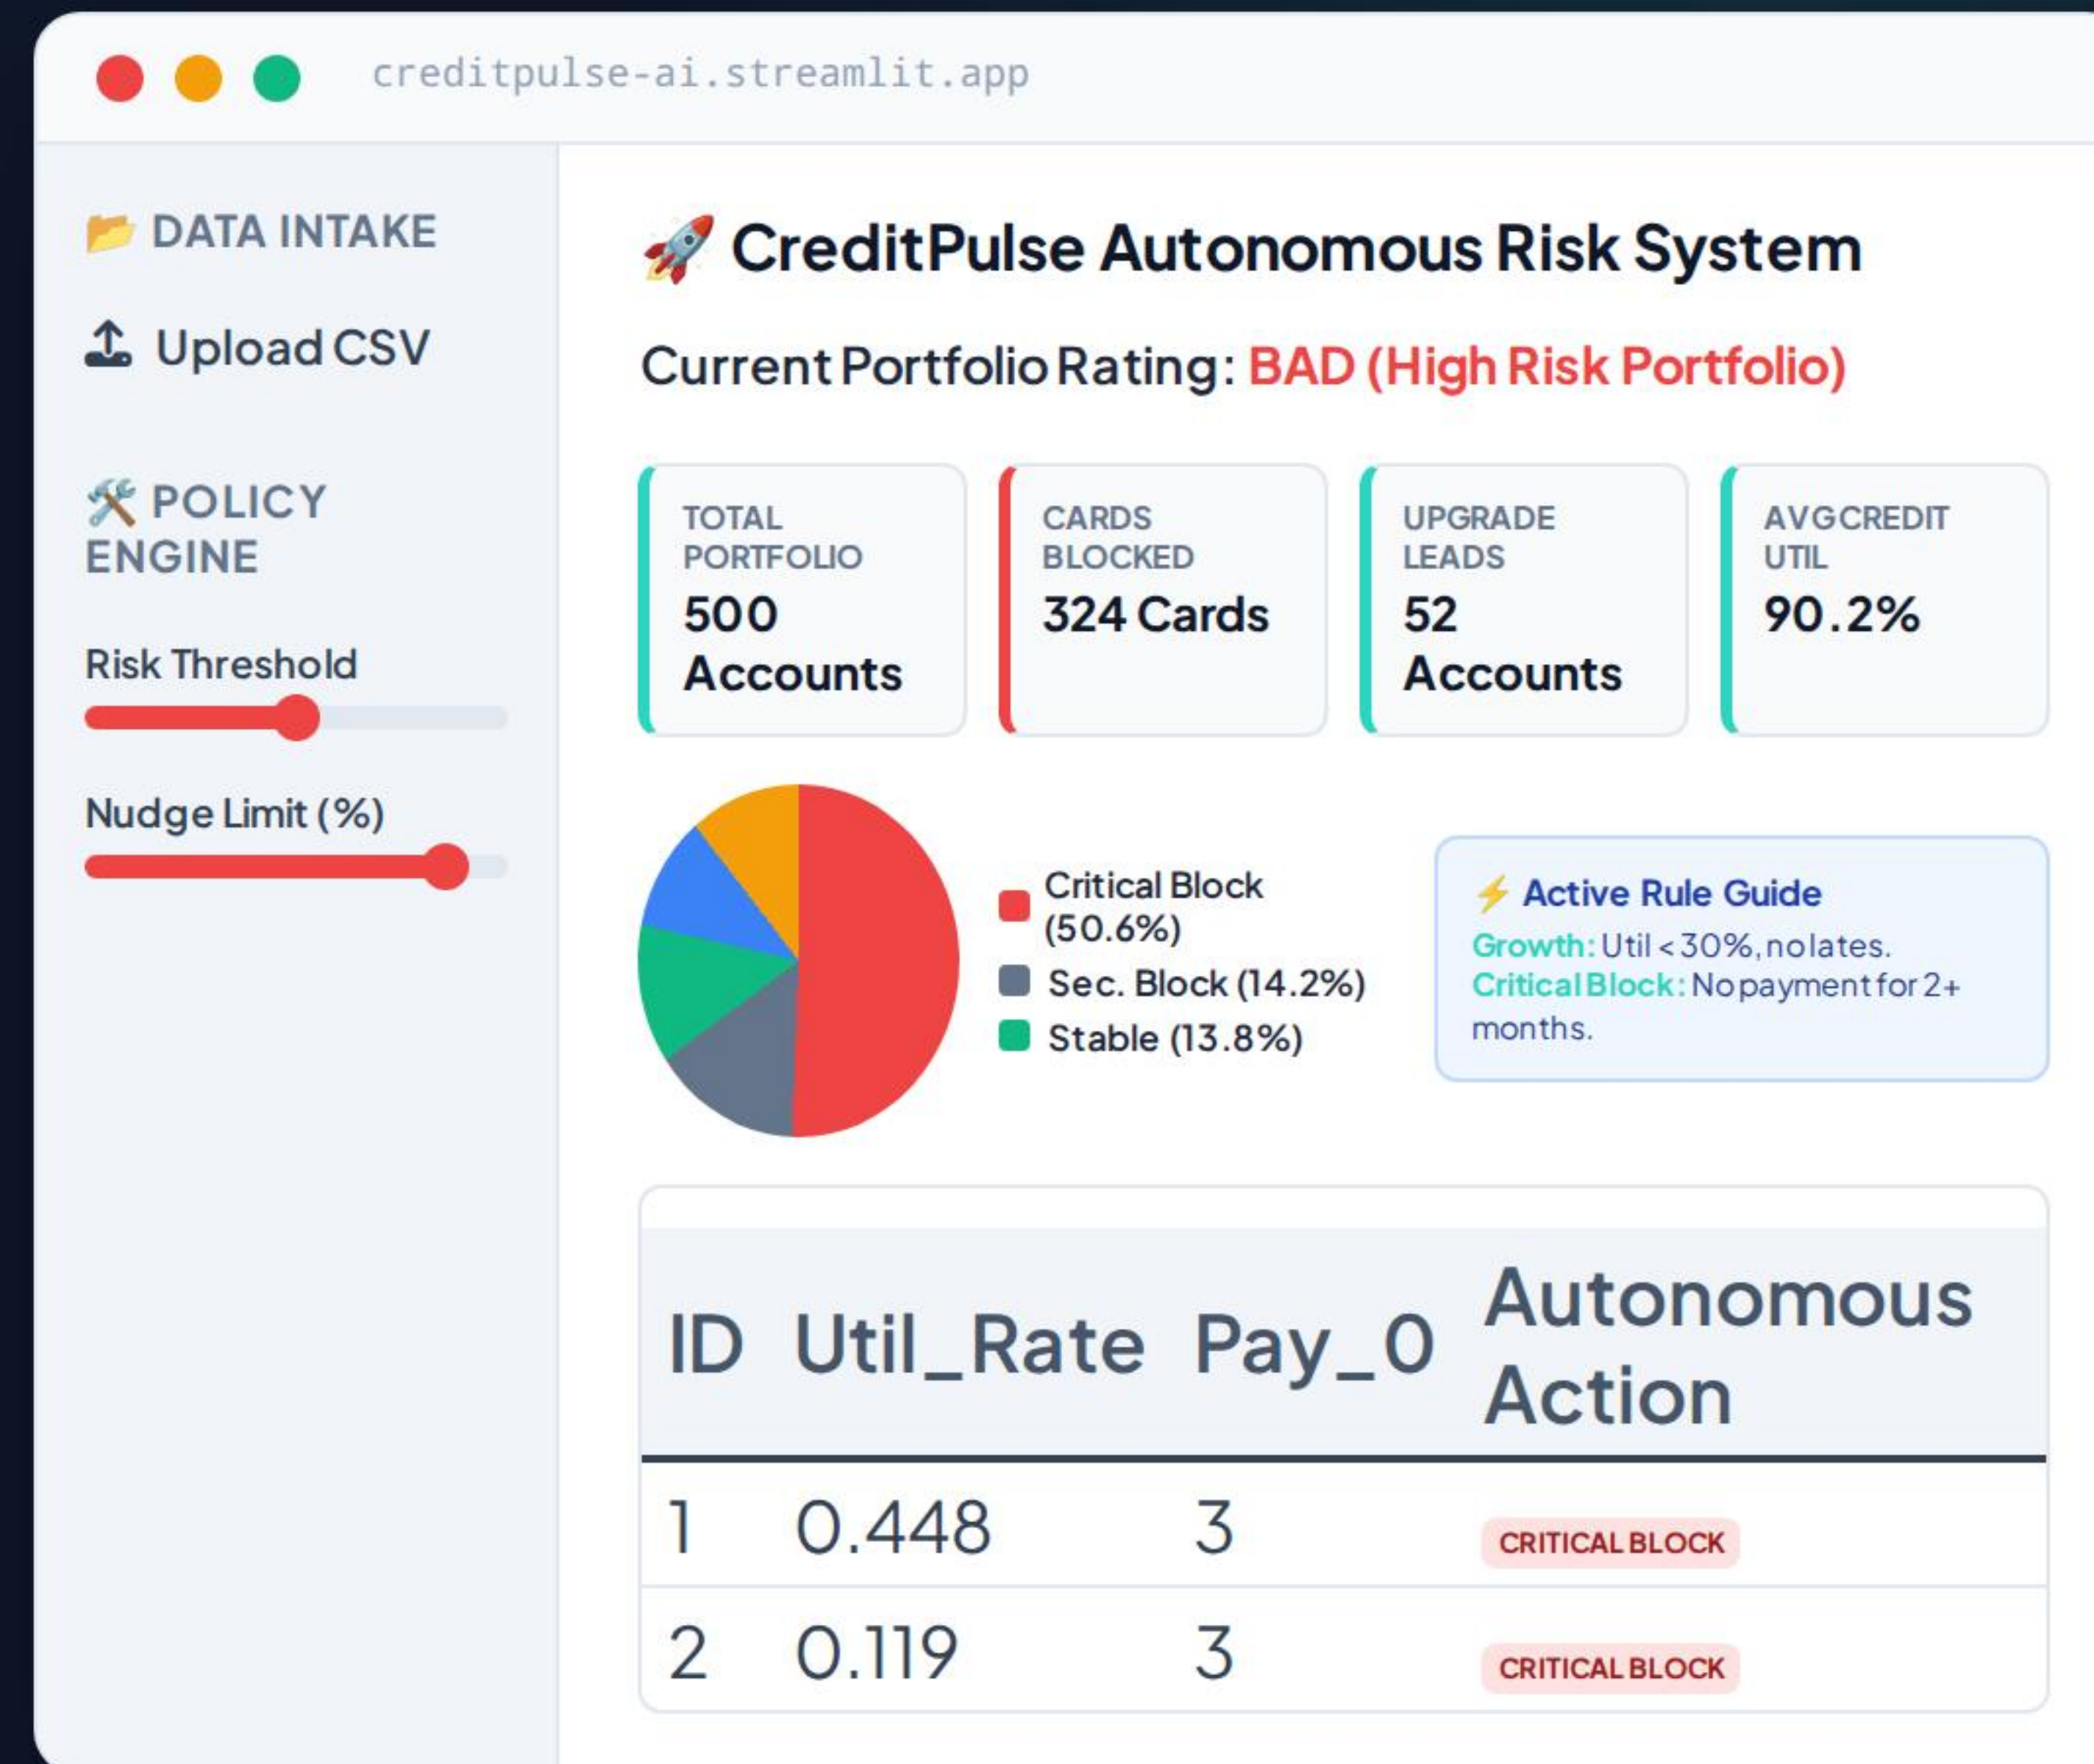

Immediate raw ingestion. The analyst drags a messy CSV directly into the AI dashboard for real-time risk grading.

The Interactive AI Engine

 **Live Policy Sandbox:** Fine-tune risk thresholds and limits on-the-fly via Streamlit slider controls.

 **Autonomous Distribution:** Multi-tiered segmentations instantly color-grade portfolios into explicit risk-action states.

 **Actionable Registry:** Triage accounts immediately from Growth up to Critical Block states.

Secure & Compliant Architecture

Zero corporate data leaks ensured by combining 100% synthetic validation pipelines with strict regional DPDP Act compliance frameworks.

1. Data Intake

Smart column auto-mapping & clean CSV/Excel ingestion directly at dashboard level.

2. Processing Core

Scikit-Learn ML scoring engine executing real-time portfolio audits & risk triaging.

3. User Dashboard UI

Streamlit front-end generating registry data tables & dynamic policy switch overrides.

The Intelligent Decision Engine

Universal Intake

Smart auto-mapping logic handles unstructured customer file headers and messy data formats with zero setup friction.

Autonomous Auditor

Sophisticated multi-parameter modeling triages risk portfolios immediately into Growth, Stable, Nudge, or Critical Block states.

Dynamic Controls

Interactive limit sliders empower risk managers to test credit policy variants instantly before formal implementation.

Target Market & Scale Strategy

Ideal Customer Profile (ICP)

Digital-first micro-lending apps, Peer-to-Peer (P2P) credit platforms, and fast-scaling Fintech NBFCs operating across emerging Indian markets.

Acceleration Growth Loop

Bypassing slow traditional procurement cycles through a developer-centric sandbox approach. Let risk managers upload test portfolios and see grading limits in under 10 minutes.

Infrastructure Models & Pricing

Pricing Tier	Target Alignment	Operational Model	Value Metric
Pilot Sandbox Tier	Accelerator sandboxes & verification pilots	ZERO-COST	Testing ingestion with limited volumes
Commercial Volume Tier	High-velocity growing Fintech scaling apps	FLAT RECURRING	Scaled dynamically by volume of active profiles
Enterprise Infrastructure Tier	Regulated, enterprise tier financial entities	CUSTOM SLA	Dedicated secure cloud deployments

Stress-Test Live

Experience our autonomous risk grading system running real-time simulations.

 Launch Live Demo App

Designed for Modern Lenders & Risk Managers

Operational Milestones

- ✔ **Completed Deployment:** Built and optimized the risk-mapping model algorithm and deployed the active Streamlit app.
- 🔗 **Strategic Partnerships:** Commencing targeted incubator validation loops and micro-lender integrations.
- 🚀 **Next Infrastructure Phase:** Scaling localized models to run securely on cloud multi-tenant deployment layers.
