

CreditPulse-AI

Autonomous risk management and real-time credit portfolio monitoring engines for modern lenders.

Launch Production Streamlit App

github.com/srinivasta

Legacy Risk Auditing is **Slow & Static**

✗ Severe Operational Backlogs

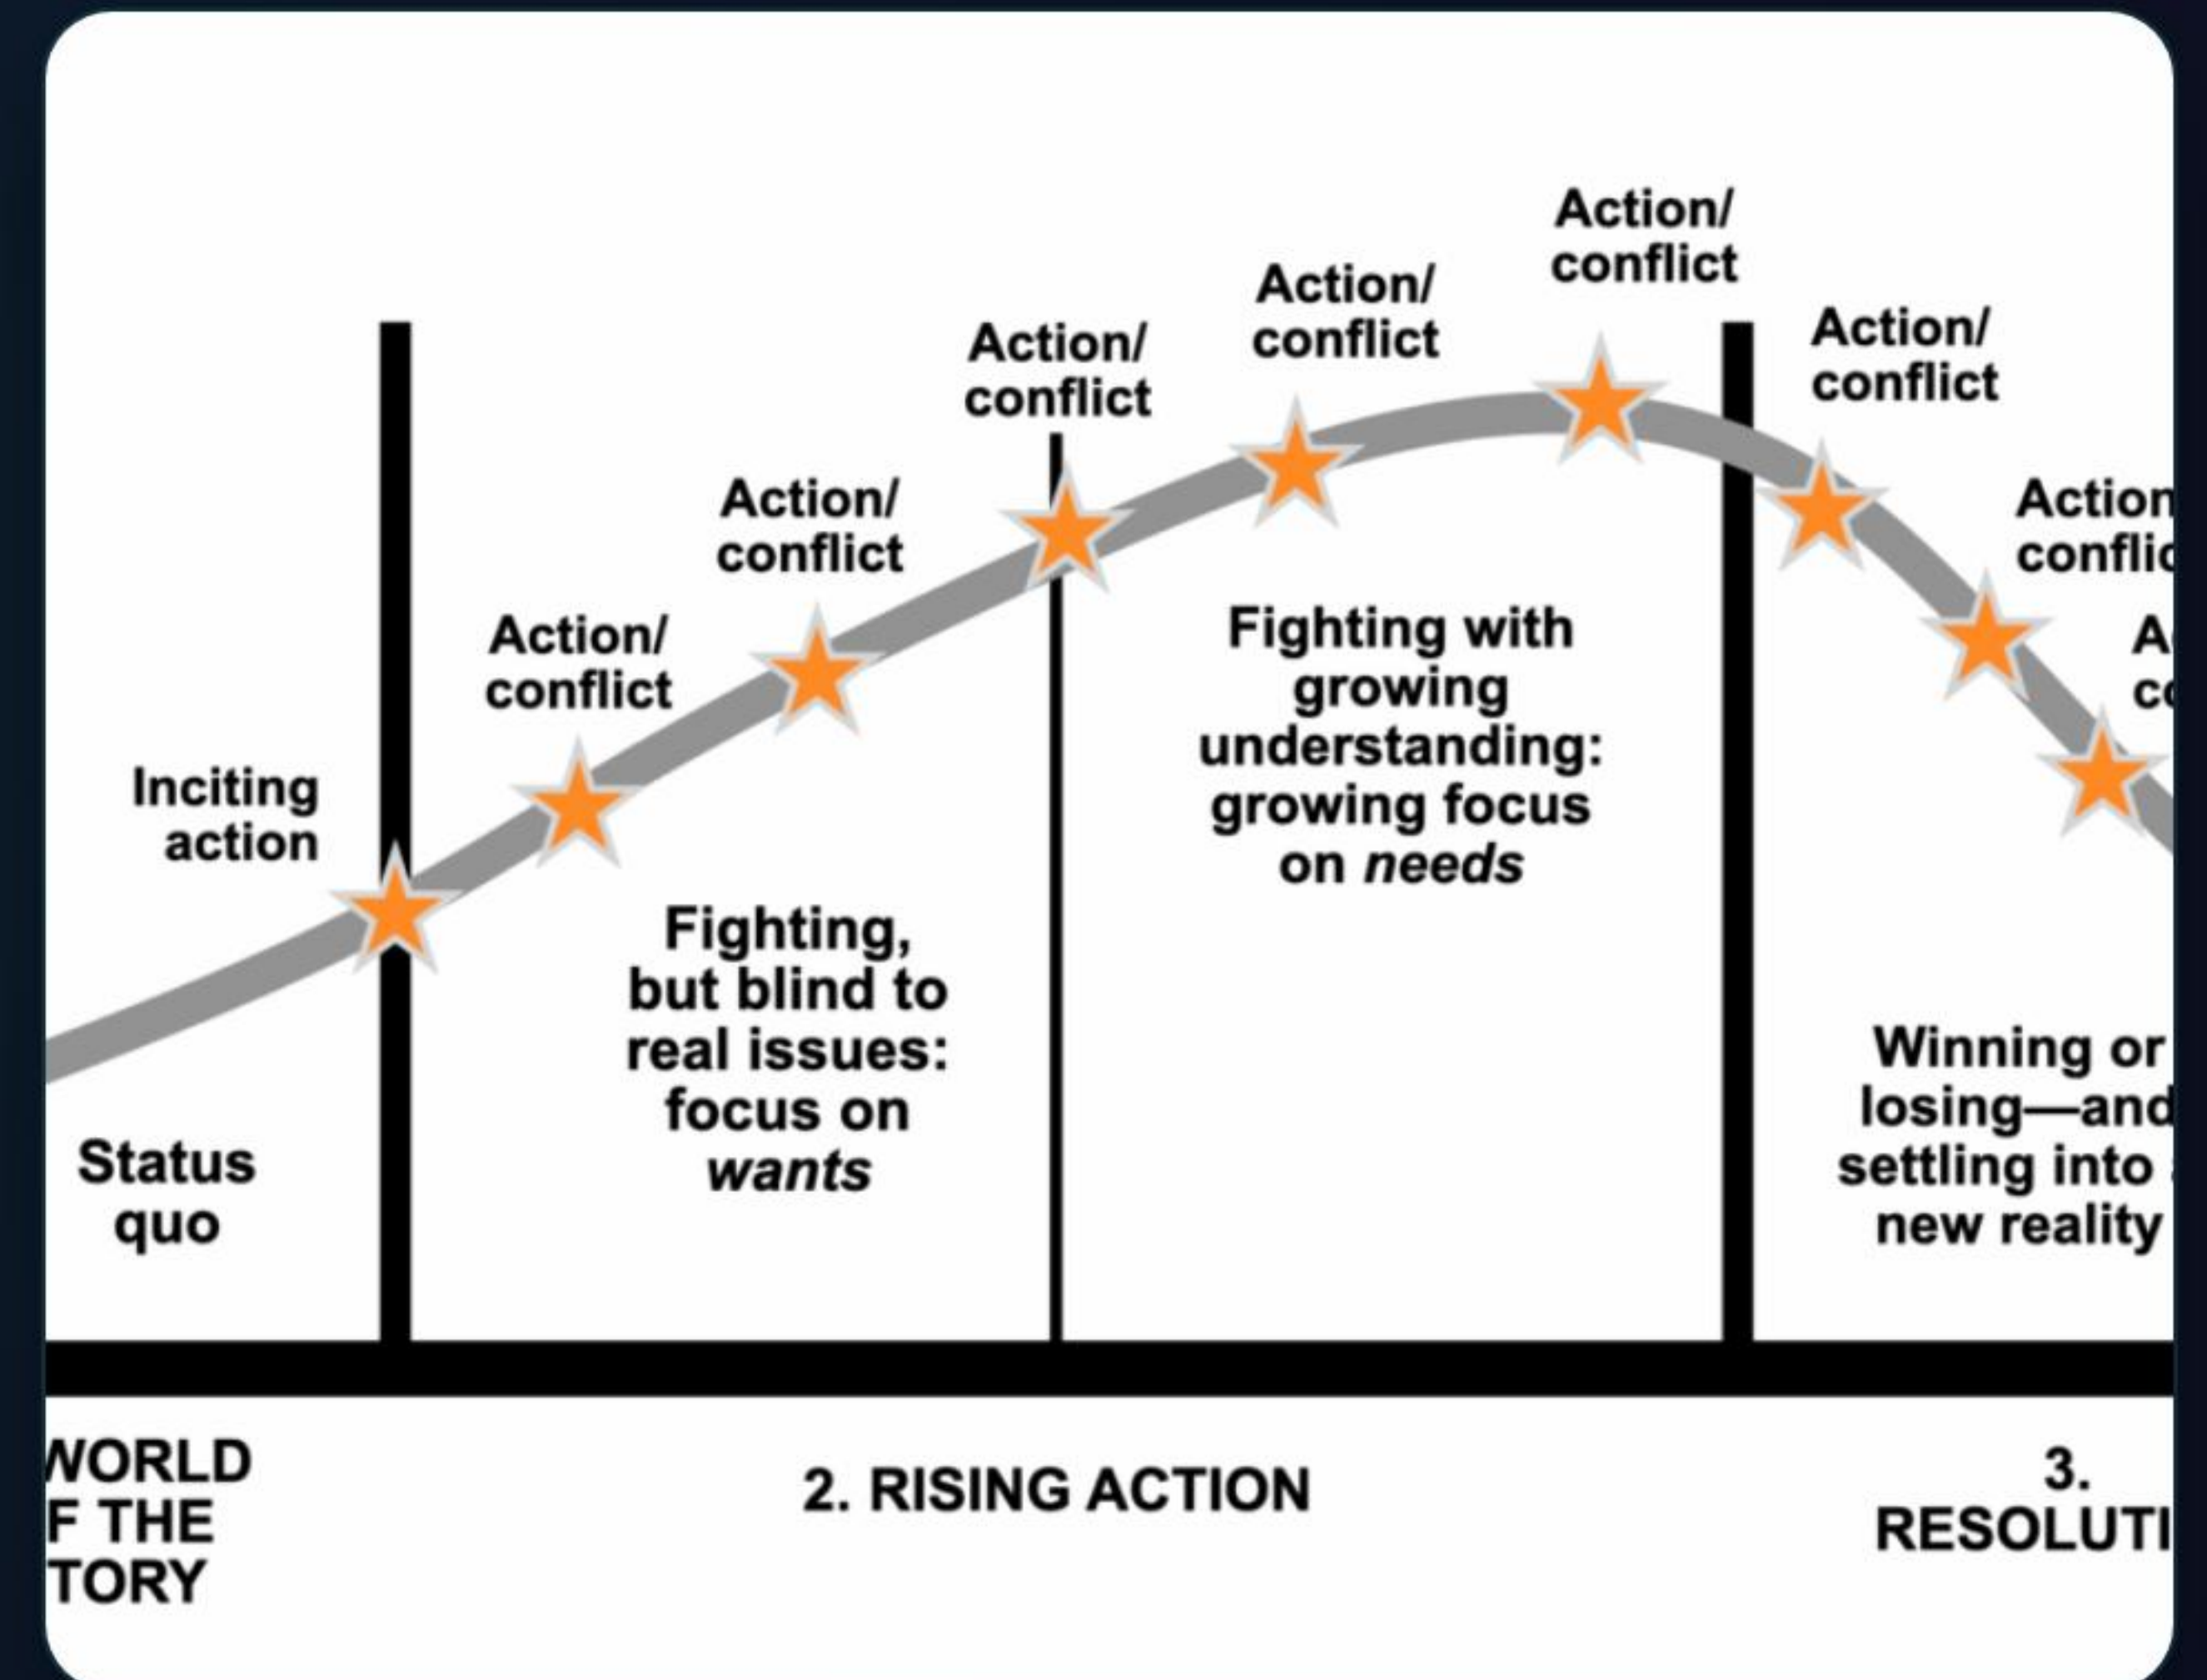

Lenders lose valuable hours executing manual account reviews and maintaining rigid legacy spreadsheets.

✗ Failure to Show Business Impact

Static risk spreadsheets are unable to calculate instant financial exposures when volatile market risk thresholds change.

✗ Delayed Loss Detection

Delinquency and credit over-utilization trends go fully undetected until major capital losses are already booked.

The **Autonomous** Decision Engine

Autonomous Auditor

Built-in mathematical risk mapping logic instantly triages and categorizes accounts into operational levels: Growth, Stable, Nudge, or Critical Block.

Dynamic Controls

Allows risk managers to easily tweak policy limit sliders on-the-fly and immediately simulate credit portfolio changes before executing policy.

Universal Intake

Seamless processing of standard transaction CSV or Excel spreadsheets including auto-mapping of file headers and intelligent dataset cleanup.

Interactive Pulse-Check Engine

Live Policy Sandbox

Adjust risk limits, debt-to-income controls, and over-utilization alerts dynamically using interactive sliders.

3D Health Analytics

Visualize multidimensional risk grids instantly as your custom policy thresholds update on-screen.

Real-Time Grading Scale

Automatic scoring rules evaluate raw portfolio risk instantly and assign health tags from  EXCELLENT down to  BAD.

 Python Engine

Streamlit Front-End

Scikit-Learn / Pandas

Interactive Streamlit application dashboard featuring dark theme financial graphs and 3D portfolio scatter plots

Our Current Operational Milestones

ACTIVE FOCUS

Incubation & Pilot

Applying to strategic fintech incubators and aiming to partner with micro-lending institutions for field validation.

COMPLETED

Technical Prototype

Core risk-mapping ML architecture, dynamic parameters dashboard, and functional app successfully deployed live on GitHub.

NEXT PHASE

Enterprise Migration

Migrating the high-performance local Python engine into secure enterprise cloud multi-tenant infrastructures.

Let's Accelerate Automated Risk AI

Partner with us to build compliance-ready credit portfolio scoring engines for modern lenders.
